

FIELD TESTED, WORKER APPROVED.

A worker in orange safety gear is using a Vogt Turbo Spade to dig a hole in the ground. The tool has a long, black handle and a blue air hose attached to it. The background shows a construction site with a chain-link fence and some vegetation.

VOGT[®]
WorkTec

ERGONOMIC AIR POWERED

Vogt Turbo Spade and Hammer work to reduce the effort and fatigue involved in manual work site operations. The application possibilities of these tools is endless due to the many available bits - all useful for specific job requirements. Vogt air tools are built to be lightweight, ergonomic, and supremely comfortable for extended use. The 'T' shaped handle on the Turbo Spade is ideal for vertically oriented tasks, while the 'D' handle on the Hammer is ideal for horizontal work, and work in tighter spaces. Quick-change tools allow for rapidly switching between tasks, and an overall increase in production.

FATIGUE FREE PRODUCTIVITY

A worker in orange safety gear is kneeling on the ground, using an AirSpade to excavate. The tool has a yellow handle and a silver nozzle. The worker is holding the handle with both hands, and the nozzle is pointed into the ground. The background shows a construction site with some vegetation.

AIRSPADE[®] **SAFE AIR EXCAVATION**

Sensitive underground cables and pipes can often be punctured by traditional digging methods. Utility Airspade offers a safe, non-damaging alternative for soil excavation. AirSpade's patented, supersonic nozzle turns compressed air into a high-speed, laser-like jet moving at twice the speed of sound, Mach 2. All of the energy and momentum of air moving at approximately 1,200 mph is focused into the soil, dislodging it in a fraction of a second. Stronger, non-porous materials such as metal or plastic pipes, cables, or even tree roots are unaffected. The result is faster, safer, more effective digging.

EXCAVATION • DEMOLITION • UTILITY / CONSTRUCTION • LANDSCAPING / TREE CARE
